Your First Class partner for audiometric booths

Puma Soundproofing was founded in Milan-Italy in 1970, it is specialized in design and manufacturing of soundproofing and acoustic solutions for professionals in the medical field.

Puma offers a wide range of modular audiology booths and audiology rooms available in standard or customized sizes and configurations, conform with International standard UNI EN ISO 8253 1:2010 and regulation EU 2017/745 regarding class I medical devices and registered at the Italian Ministry of Health. Puma offers 8 lines of acoustic booths manufactured with innovative and eco-sustainable materials, several different noise reduction levels, internal and external finishes and a large number of accessories.

All of our products can be sanitized according to directives of the Italian Ministry of Health. Puma is actively selling in more than 60 countries and has over 6000 successfully installed booths in hospitals, clinics, universities and medical practices. With over 50 years of experience in the soundproofing industry, offering high quality products and the best of Italian design, Puma stands among the leading manufacturers of soundproof booths in the global ENT market.

PRO25

Basic compact and portable solution

NEW

PRO25 booth is recommended for hearing screening in audiology centers and shops for those who have limited space available and need a very small soundproof booth.

Optimal solution for temporary situations, for occupational medicine, in companies and schools.

The internal finishing is made with in sound-absorbing polyurethane, coated with acoustic lining, sanitizable according to directives of the Ministry of Health.

External dimensions (on adjustable feet) 96 x 96 x 197h cm, can be equipped with 4 wheels and converted in portable booth (height on wheels 208h cm). Ideal solution for mobile audiology units.

- The smallest, lightweight and portable soundproof booth
- Designed for hearing screening in audiology centres
- Noise attenuation up to 43 dB
- Complies to ISO 8253 1:2010
- Quick installation with DIY kit
- Magnetic, reversible door
- New sanitizable internal lining
- Available on wheels

PRO28F

Premium compact and portable solution

PRO28F booth is a complete and excellent solution for hearing screening and diagnostic tests in audiology centers and shops. Thanks to the innovative internal isolating material, it provides outstanding sound attenuation. The internal finishing is composed by a special soundproofing fiber covered with a sanitizable, fireproof, highly resistant acoustic material which provides the cabin with a perfect acoustics. Provided with integrated silenced ventilation system and vertical window on door. External dimensions (on adjustable feet) 96 x 96 x 197h cm, can be equipped with 4 wheels and converted in portable booth (height on wheels 208h cm). Ideal solution for mobile audiology units.

- High performance up to 43 dB
- Complies to ISO 8253 1:2010
- Innovative materials for a perfect internal acoustics
- Quick and easy installation with DIY kit
- Reversible magnetic door
- Integrated silenced ventilation system
- New sanitizable internal lining
- Available on wheels
- Vertical window on door

PRO30

Basic modular soundproof booth

PRO30 is a modular booth available in a wide range of standard and bespoke sizes starting from 100 x 100 cm size for mobile units, up to 3 x 3 m. with door opening 75 cm and ramps (on request) for wheelchair access. It is recommended for hearing screening and diagnostic tests in audiology centers. The modular, light solutions are suitable for different applications and exams such as free field and pediatric tests. The structure of the cabin is made of a supporting aluminum frame insulated by acoustic materials. The interior finishing is made of anthracite grey acoustic pyramid foam, designed to reduce sound waves for optimal acoustics. Available with **saniVENT** (as optional) a new soundproofing and sanitizing air-exchanging system to sanitizes actively both the air and the internal surfaces.

- Light and quick to install, no need of any structural intervention on floor
- Wide range of standard and bespoke sizes up to 3 x 3 m.
- Noise attenuation up to 40 dB
- Complies to ISO 8253 1:2010
- Easy access to wheelchairs
- Silent ventilation system
- Available with **saniVENT**

Diagnostic Line

PRO35F

Premium modular
soundproof booth

PRO35F is a diagnostic modular soundproof booth manufactured with high density isolating fiber. It provides an excellent noise reduction level and outstanding internal acoustics, and at the same time an easy to assemble, lightweight solution. The structure of the cabin is made of a supporting aluminum frame and panels are supplied with Cam-Lock system which significantly reduces the installation time. The internal finishing is composed by a special soundproofing fiber covered with a sanitizable, fireproof, highly resistant acoustic material which provides the cabin with a perfect acoustics. Available in standard and bespoke sizes up to 3 x 3 m with door opening 75 cm and ramps (on request) for wheelchair access. Available with **saniVENT** (as optional) a new soundproofing and sanitizing air-exchanging system to sanitizes actively both the air and the internal surfaces.

- Extremely quick and easy assembly with Cam-Lock system
- Innovative sanitizable internal acoustic lining
- Excellent noise attenuation up to 44 dB
- Complies to ISO 8253 1:2010
- Wide range of standard and bespoke sizes up to 3 x 3 m.
- Free field and audiology equipment configuration
- Easy access to wheelchairs
- No need of any structural intervention on floor
- Silent ventilation system
- Available with **saniVENT**

PRO40

Mobile
soundproof booth

PRO40 is an audiometric booth in metal that offers an excellent level of soundproofing. The internal finish is perforated for an excellent sound absorption. It is made out of highly durable, flame retardant and washable steel in white color. Thanks to the provided wheels it can be moved easily inside any room (SLIM and 1x1).

PRO40 SLIM

It is recommended for screening in audiology centers, hearing aids shops and for all those that need a compact cabin.

The booth can also be used inside mobile units, for the occupational medicine or as temporary installations in companies and schools. It can be moved easily and can pass through any standard door thanks to the compact design and wheels, it is shipped assembled, ready for use.

PRO40 1x1

It is recommended for clinical and diagnostics tests in audiology centers, hospitals, hearing aids shops and for all those that need a performing 1x1 metal booth. It is shipped unassembled with DIY kit.

- Metal soundproof booth on wheels
 - Available in two sizes: SLIM and 1x1
 - Can be easily moved inside a room
 - High performance up to 52 dB
 - Complies with ISO 8253 1:2010
 - Door with magnetic closure
 - Led lighting system
 - Integrated silenced ventilation
-
- Designed to pass through doors (SLIM)
 - Ideal for mobile units (SLIM)
 - Shipped assembled ready for use (SLIM)
-
- Easy access for wheelchairs (1x1)
 - Shipped with DIY for easy assembly (1x1)

PRO45S

Deluxe modular
soundproof booth

PRO45S is the finest Puma soundproof booth, it encloses the best design and performance in a versatile product, ideal for for clinical analyses and diagnostic tests in hospitals and specialized audiology centers.

This is a modular booth available in standard and bespoke sizes up to 6 x 6 m. The structure is made of a supporting aluminum frame insulated by acoustic materials, while the interior finishing is covered with a sanitizable, fireproof, highly resistant acoustic material that creates a very pleasant and comfortable environment. It features a floating floor to reduce vibrations and a total glass door. On request, acoustic panels can be provided to enhance the internal acoustics. The door has a 75 cm opening and can be equipped with ramps (on request) for wheelchair access.

Also available with Faraday shielding to perform ABR/BERA tests. Available with saniVENT (as optional) a new soundproofing and sanitizing air-exchanging system to sanitizes actively both the air and the internal surfaces.

PROMetal SW

Superior Single wall steel
soundproof booth

PROMetal SW is recommended for clinical analyses and diagnostic tests in hospitals and specialized audiology centers. The steel single wall structure with 15 cm of thickness, electrostatically painted, provides high noise attenuation up to 55 dB. The cabin is installed on a 10 cm thickness base and stands on special anti-vibration adjustable feet. Manufactured in standard and bespoke sizes with a 80 cm opening door, can be equipped with ramps (on request) for wheelchair access and other optionals.

- Single wall steel structure
- High noise reduction up to 55 dB
- Complies to ISO 8253 1:2010
- Available in a wide range of standard and bespoke sizes
- Silent ventilation system
- Free field configuration
- Jack connection panel
- Easy access to wheelchairs
- Sanitizable internal finishing

PROMetal DW

Top-grade Double wall
soundproof booth

PROMetal DW is recommended for clinical analyses and diagnostic tests in hospitals and specialized audiology centers to perform in-depth examinations where the background noise level is high and could affect the test results. Panels are completely made of scoured steel plate, electrostatically painted. Manufactured in standard and bespoke sizes, the double wall booth consists of a structurally isolated inner room and outer room not mounted on the same base of a 10 cm thickness, standing on anti-vibration adjustable feet. It is supplied with double 80 cm opening door, for an optimal noise reduction up to 94 dB and can be equipped with ramps for wheelchair access and other optionals.

- Double wall steel structure
- Very high noise reduction up to 94 dB
- Complies to ISO 8253 1:2010
- Available in a wide range of standard and bespoke sizes
- Silent ventilation system
- Free field configuration
- Jack connection panel
- Easy access to wheelchairs
- Sanitizable internal finishing

Acoustic panel Pixel

Elegant modular solution for
the acoustic treatment

Acoustic panels Pixel are recommended for the acoustic treatment in medical environments such as audiology centers and hearing aids shops.

Designed with a double type of thickness (10 cm available only in white and 5 cm available in red, green, white and blue) this system is ideal when installed by alternating the thicknesses randomly for a higher reduction of the reverberation and for an eye-catching texture when laid on the surfaces.

Acoustic panels Pixel are made of high density fiber covered with acoustic fabric, enhancing the acoustical performance of the environment providing an excellent sound absorption. The laying of panels is quick and simple thanks to the provided water based glue and the different sized kits prepared according to the dimensions of the room to treat. These panels can be laid on the internal walls of PRO45S booth by using Velcro system.

Panels 10 cm and 5 cm thickness

- Elegant solution to improve the acoustics
- Easy and quick application
- Available in standard kits or bespoke project
- Recommended to perform free field test
- Available for PRO45S booth
- New colors available
- Sanitizable product

All our products offer the best of Italian design

Pixel

Acoustic Panels

Audiology Rooms

Customized turn-key soundproofing projects

Puma provides consultancy, design and building of bespoke soundproof rooms for audiology wards in hospitals and specialized clinics, private practices and hearing aids shops.

This solution is recommended when a booth cannot be installed and a fully customized solution is required by maintaining a very high noise attenuation.

Our structures, as standard, grant an average 55 dB noise reduction level, reaching up to 75 dB (between 500 Hz and 1000 Hz).

This type of treatment involves structures with remarkable thickness, made up with partitions, counter walls and ceilings, double rooms and floor with inertial mass.

The building includes also connection panels for medical instruments, set-up of the room for the installation of the existing systems (lighting, power, cooling and heating systems and air exchange), aphonic doors and windows.

Audiology Room

- Bespoke soundproofed solutions
- High noise attenuation up to 75 dB
- Recommended for the best optimization and customization of space
- Sanitizable product

All our products offer the best of Italian design

saniVENT

Soundproofing and
sanitizing
air-exchanging system

Active sanification.
Unlike passive sanitization systems (traditional filters, germicidal lamps) which retain and destroy part of the harmful substances only in the spot where they come installed, saniVENT has a direct effect on harmful substances present in the complete air flow coming into the booth and on all the surfaces the flow comes in contact with.
The sanitizing system is integrated in the ventilation box. It is not visible from outside and it works automatically when the fan is in function.

- Sars-CoV-2 decay with saniVENT 99.7% greater than in normal conditions
- Actively sanitizes both the air and the booths' internal surfaces
- Guaranteed efficacy thanks to the combined action of UV light and noble metals (photocatalysis)
- Suitable for PUMA's acoustic booths PRO30, PRO35F, PRO45S, easily replaceable to old ventilations
- Easy maintenance after 2 years

All our products offer the best of Italian design
